

# How to deliver a successful team programming project?

in 3 steps

## 1. Set the project milestones

1. Choose a team leader.
2. Assign a task to every team member.
3. Make a shared calendar of activities and deliverables.
  - Team meetings
  - Programming sessions
  - Code reviews
  - Testing
  - etc.
  - [calendar.google.com](https://calendar.google.com)

## 2. Manage the project

Use a simple project management tool:

A Kanban board is an agile project management tool.

e.g. [trello.com/b/1Jz6SorC/the-dev-board](https://trello.com/b/1Jz6SorC/the-dev-board)

You can create a free account on [trello.com](https://trello.com)

3

## 3. Communicate and collaborate

Every team member **should** write part of the code!

1. **Pair programming**: an agile programming technique in which programmers work together at one workstation.

or use

2. **Git**: a distributed software version control system.\*
